Statistics: Mean 9.653; Variance 4.972; scale 1.941

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence has been validated by Multiple Complete Digest Mapping. Comparison of the experimentally derived map digest fragments with sequence-predicted fragments is given below.

Small fragments below a variable cutoff (approximately 400-600bp) are not mapped and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragment groups are separated by dashed lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DS or two chemical single stranded regions:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  l error in 10,000 bp.
Base-by-base quality values are not generally visible from the Genhank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Double stranded (DS) coverage: DS or two chemistry coverage:

Medical Center Dr., Rockville, MD 20850, USA
On Jul 24, 1998 this sequence version replaced gi:3241936.
On Jul 24, 1998 this sequence to: Mark Adams The Institute for Genomic Research 9712 Medical Center Dr., Rockville, MD 20850, USA e-mail address: humgen@tigr.org. The orientation of the sequence is from Sp6 end to T7 end. Genes were identified by a combination of five methods including: XGRAIL (available by anonymous ftp from arthur.epm.ornl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.Edu/-chris/GENSCANW.html)searches of the complete sequence against a peptide database, and the Human gene index database at TIGR (http://www.tigr.org/tdb/hgi/hgi.html).

Genes without pepetide homolgy having spliced EST hits are termed 'Unknown gene product'. Genes encoding tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (see W88491-508), vectors containing such polynucleotides, and enhanced the cells containing the vectors. The proteins can be used as antigens or as compositions in the preparation of antibodies against the proteins. The polynucleotides can be used as probes for gene diagnosis, and as gene sources for gene therapy and large-scale production of proteins encoded by the cDNA. The host cells are used for the detection of ligands corresponding to the expressed proteins, and the screening of low mol. wt. medicines. Sequence 439 BP; 89 A; 137 C; 109 G; 104 T;
                                                                                                                                                                                                                                                             Claim 3; Page 14; 23pp; English.
Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51737-5-4 and Q51747-59.

Introducing random point mutations into nucleic acods -
pr by prepn of single Stranded template, annealing a primer, elongation,
pr misincorporation, completion of molecules and screening.
PS Disclosure; p; English.

CC Random point mutations were introduced into the alpha fragment of
CC Encoli beta-galactosidase. The wild type sequence was obtained as a
CC single stranded template and an oligonucleotide was hybridised to
CC it to generate a popn of DNA molecules which terminate at all
CC possible nucleotide positions within a specified region. The
CC variable 3' ends generated in this way are used as primers for
CC reverse transcriptase. Nucleotides are misincorporated by the
CC camplified and then expressed in a suitable host-vector system.
CC amplified and then expressed in a suitable host-vector system.
CC The sequence covers all 176 difft base substitutions, most of which
CC See also P80575.

Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Random point mutations were introduced into the alpha fragment of E. coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-MAY-1988.

Base substituted E.coli beta-galactosidase alpha-fragment.
E.coli beta galactosidase alpha-fragment; base substitution
Escherichia coli.
                                                                                                                                                                        Generic DNA sequence to generate a random TSAR petide library. TSAR: totally synthetic affinity reagent; synthetic; binding ceffector domain; concateneated heterofunctional protein; linke direct; rapid; detection; screening; treatment; generic; ss.

PT Identifying proteins or peptide(s) which bind a ligand - by PT Screening a recombinant vector library expressing fusion proteins omprising a binding domain and an effector domain PS Disclosure; Page 35; 259pp; English.

CC 070467 is a generic DNA sequence used to generate random TSAR (Totally CC Synthetic Affinity Reagents) peptides. This generic formula can also be crepresented as follows: X(NNB)16/TGC)(NNB)17 (NNB)16/TGC)(NNB)17 X CC and Y are flanking restriction sites (X is not the same as Y) that are constrained by these generic sequences are shown in 070466-68. CC other specified further. Other generic sequences are shown in C70466-68. CC other specified peptides generated by these generic sequences are shown in CC engrising at least two functional regions - a binding domain with a strength of the strength of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         D,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain bisclosure; Page 35; 255pp; English. Q70468 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)11(TGC)(NNB)6Z(NNB)7(TGC)(NNB)107. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Generic DNA séquence to génerate a random TSAR petide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         270468;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC comprising at least two functional regions - a binding domain with CC affinity for a ligand and a second effector peptide portion that is CC chemically or biologically active. They may further comprise a linker CC peptide between the 2 domains. The oligonucleotides are also designed so CC that the expressed peptide contains 2 or 4 cysteine residues positioned CC in, or flanking, the unpredicted or variant residues. These residues CC confer some degree of conformational rigidity to the peptides. The TSARS CC compans. comprising a TSAR binding domain can be used in rivo to CC deliver a chemically or biologically active molety, eg. metal ion, CC compans. comprising a TSAR binding domain can be used in rivo to CC deliver a chemically or biologically active molety, eg. metal ion, CC compissions of polyclonal antibodies and therefore circumvent the need CC complex methods of hybridoma formation or in vivo antibody CC complex methods of hybridoma formation or in vivo antibody CC production. The TSARs are easily characterised and have designed activity SQ Sequence 114 BP; 0 A; 2 C; 2 G; 2 T;
Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins or comprising a binding domain and an effector domain proteins of comprising a binding domain and an effector domain of the proteins of the prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

BESULT OF THE PROPERTY OF THE 
                                               PT Identifying proteins or peptide(s) which bind a ligand - by processing a binding domain and an effector domain fusion proteins comprising a binding domain and an effector domain proteins comprising a binding domain and an effector domain (C 070465 is a generic DNA sequence used to generate random TSAR (Totally C Synthetic Affinity Reagents) peptides. This generic formula can also be crepresented as follows: X(NNB)6(TCC)(NNB)11Z(NNB)14(TCC)(NNB)3Y. X (C and Y are flanking restriction sites (X is not the same as Y) that are constructed by these generic sequences are shown in 070466-68. C other specified further. Other generic sequences are shown in 070466-68. C other specified peptides generated by these generic sequences are shown in 070466-68. C other specified periods generated by these generic sequences are shown in 070466-68. C other specified periods generated by these generic sequences are shown in 070466-68. C other specified periods generated by these generic sequences are shown in 070466-68. C other specified periods generated by these generic sequences are shown in 070466-68. C other specified periods and a second effector peptide portion that is 070466-68. C other specified periods and an openided period generated by these generic sequences are shown in 070466-68. C other specified periods and an openided so other specified periods and an openided so other specified periods. The oligonucleotides are also designed conformationally or biologically active moiety. General specific target or on the 070466-68. C other specified periods are designed of the periods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed conformation or in vivo antibody sequence of the openides and therefore circumvent the need of production. The TSARs are easily characterised and have designed conformation of the openides of the need of the openides of the openi

The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process. Sequence 114 BP; 6 A; 12 C; 0 G; 0 T;

The present sequence is an antisense oligonucleotide specific for the human endothelin-1, targeted at the initiation codon. The method can be used to treat airway diseases such as cystic fibrosis, as thma, chronic obstructive pulmonary diseases, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper-reactive airways. Sequence 178 BP; OA; 52 C; 46 G; 32 T;
                                                                                                            Generic DNA sequence to generate a random TSAR-9 petide library. TSAR: totally synthetic affinity reagent; synthetic; binding dom effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.

CC that are not specified further. Other generic sequences are shown in CC 070466-68. Dther specific peptides generated by these generic sequences

CC are shown in R65151-54. TSARs are concatenated heterofunctional proteins

CC of peptides, comprising at least two functional regions - a binding

CC domain with affinity for a ligand and a second effector peptide portion

CC that is chemically or blologically active. They may further comprise a

CC linker peptide between the 2 domains. The oligonucleotides are also

CC designed so that the expressed peptide contains 2 or 4 cysteine residues

CC positioned in, or flanking, the unpredicted or variant residues. These

CC positioned in, or flanking, the unpredicted or variant residues. These

CC positioned in, or flanking a TSAR binding domain can be used in

CV vivo to deliver a chemically or biologically active moiety, eg. metal

CC ion, radiolasotope, peptide, toxin or enzyme, to the specific target or

CC monoclonal or polyclonal antibodies and therefore circumvent the need for

CC complex methods of hybridoma formation or in vivo antibody production.

CC flee TSARs are easily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comprising a binding domain and an effector domain DiscLosure; Page 35; 255pp; English. Q70466 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)1(TGC)(NNB)10(TGC)2(NNB)4Z(NNB)8(TGC)(NNB)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying proteins or peptide(s) which bind a ligand screening a recombinant vector library expressing fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P-PSDB; R65152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Generic DNA sequence to generate a random TSAR peptide library. TSAR; totally synthetic affinity reagent; synthetic; binding do effector domain; concateneated heterofunctional protein; linker direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q70469;

PT Identifying proteins or peptide(s) which bind a ligand - by PT Identifying proteins or peptide(s) which bind a ligand - by PT Generity a binding domain and an effector domain PS Disclosure; Page 36; 255pp: English.

CC 070470 is a generic DNA sequence used to generate random TSAR (Totally CC Synthetic Affinity Reagents) peptides. This generic formula can also be CC (CAC)2(NNB) RY. X and Y are flanking restriction sites (X is not the same CC as Y) that are not specified further. The peptides generated by this and CC incorporated into variant sequences. TSARs are concatenated conceptorated into variant sequences. TSARs are concatenated conceptorated portion that is chemically or biologically active. They can further comprise a linker peptide between the 2 domains. The TSARs concepts or compsiss. comprising a TSAR binding domain can be used in vivo to CC deliver a chemically or biologically active mote cell. They can also replace the function of macromolecules. Genoculonal or polyclonal antibodies and therefore circumvent the need CC monoclonal or polyclonal antibodies and therefore circumvent the need CC production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В

Claim 9: Column 30: 22pp; English.

Claim 9: Column 30: 22pp; English.

This preferred mixed oligonucleotide encodes a ballast constituent and is inserted between a regulatory region and the structural gene encoding a desired protein, esp. pro-insulin. The short ballast component improves protease resistance of the fusion protein while still allowing the desired protein to adopt its correct conformation prior to cleavage of the ballast constituent.

polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-C2]
library is a subtracted library derived from the UI-R-C1
library which is a subtracted library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung brain, liver,
kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day
embryo: The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which allows
identification of the library of origin of a clone within
the mixture. The subtracted library of origin of a clone within
the mixture from stracted library of origin of a clone within
the mixture. The subtracted library of origin of a clone within
the mixture. The subtracted library of origin of a clone within

This sequence has been validated by Multiple Complete Digest Mapping. Comparison of the experimentally derived map digest fragments with sequence-predicted fragments is given below.
Small fragments below a variable cutoff (approximately 400-600bp) are not mapped and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragment groups are separated by dashed lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    l error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Double stranded (DS) coverage:

On Jul 24, 1998 this sequence version replaced gi:3241936.
Address all correspondence to: Mark Adams The Institute for Genomic Research 9712 Medical Center Dr, Rockville, MD 20850, USA e-mail address: humgen@tigr.org. The orientation of the sequence is from SP6 end to T7 end. Genes were identified by a combination of five methods including: XGRAIL (available by anonymous ftp from arthur.epm.ornl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, Washington), Genscan (Chris
